

Adjustable Wheel Spike

by Dana-Ridge

The first great invention was the wheel. The second great invention was the Dana-Ridge Wheel spike on which to mount it.

The Wheel Spike is a sturdy, durable and adjustable platform that clamps to your Dana-Ridge wetblast cabinet turntable.

Useful for blasting wheel rims, which are mounted over the spike, it provides operator comfort, ease of access and protection of the rim itself.

It allows 360° rotation of the turntable and can be set at a 45° or 60° angle. It is easily removed when not required.

Included is a bearing that bolts easily to the underside of the turntable mounting plate.

This European quality bearing ensures a long life of the turntable spigot as it counteracts the off-centre weight of the wheel.
