# Mini Porta-Wet-Cyclone!

Introducing the Australian made **Mini Porta-Wet-Cyclone** from Dana-Ridge.

Changing from one blast media to another is made simple with this small and efficient unit.

Perhaps you've been using glass bead and wish to switch to an aluminium oxide for example. You can manage this quickly, cleanly and easily in a matter of minutes. This allows you to get back to achieving those amazing results from your Dana-Ridge wetblast unit for you and your customers.

Half fill the included bucket with water, place the porta-wet-cyclone on top, attach the process gun and run the machine with the air off for several minutes. It's as simple as that! You'll come back to a bucket of media that you can put aside for re-use later.
